A Handlist of Source Books on the History of Oceanography
Eric L. Mills

This is an updated version of a paper first published in Earth Science History 12 (1993), 2-4. The reference books and monographs following have been selected to aid teachers and beginning students of the history of oceanography. The list is based on two principles, either that the publications are readily available in major libraries, or that they have not been superseded as sources of information. The periodical literature is not included because of its extent. A good source of information on journal articles published between 1913 and 1975 is the Isis cumulative bibliography (ed. M. Whitrow and J. Neu); it is added to annually by the Critical Bibliographies accompanying the journal Isis.

Vaughan, Thomas Wayland, et. al, eds. International Aspects of Oceanography:

Lanham's Handlist is an excellent reference or second introduction to classical rhetoric, informed by the best scholarship. I wouldn't recommend it as an introduction. If you want to get a much better grasp on rhetorical terminology it's perfect. One thing to note: the Handlist has nothing related to 20th century rhetorical terminology. Don't expect concepts from Toulmin or Perelman to crop up here. Read more.
