FNCE204 – ANALYSIS OF FIXED INCOME INVESTMENTS  

Instructor: Ser-Keng Ang  
Tel: 6828 0284  
Email: skang@smu.edu.sg  
Office: Room 4071, Lee Kong Chian School of Business  

COURSE DESCRIPTION  

This course examines in detail the fixed income securities (non-equity) market, which comprises instruments such as treasury (government), municipal, and corporate bonds. Instruments such as convertible bonds and various forms of securitizations will also be covered.  

The course is designed to help you understand the aspects of modem theory of finance and how these developments can be translated into prudent practices.  

The course begins with the overview of the fixed income market (global, regional and local); the growing importance and influence as an instrument for financing for corporations/institutions, governments and supranational agencies; and definition/characteristics of a fixed income instrument. We will then delve into the basics of bond valuation (fixed income mathematics) and explore the relationship between bond prices, yields, and risks (bond price volatilities). With this foundation, we will examine bond volatility and the concept of duration. Next, we shall discuss the determinants of the general level of interest rates and the term structure of interest rates, as well as explore the relationship between the term structure and bond prices in general.  

In the latter part of the course, we will explore the concept of risk management and then examine specific instruments such as government bonds, securitizations (such as Mortgage-Backed (MBS), Asset-Backed Securities (ABS) and Collateralized Debt Obligations (CDO)), and other fixed income instruments.  

In addition to the theories of fixed income, the course also aims to provide participants with an understand of how investment banks originate, underwrite and trade these instruments, as well as how these origination efforts relate to the sales and marketing of other products and services sold to clients.
PREREQUISITES

Please refer to the Course Catalogue on OASIS for the most updated list of pre-requisites / co-requisites for this particular course.

Do note that if this course has a co-requisite, it means that the course has to be taken together with another course. Dropping one course during BOSS bidding would result in both courses being dropped at the same time.

RECOMMENDED TEXT AND READINGS

Author: Frank J. Fabozzi
Publisher: Prentice Hall
ISBN 0-13-243626-4

ASSESSMENT METHOD

Class Quiz: 25%
Final Quiz: 30%
Group Project/Presentation: 35%
Class Participation: 15%

Format for the quizzes and exams will be open book/notes.

The Group Project will be focused on discovering the different segments of the bonds market globally. Topics and subject matter covered will be flexible and would be dependent on the interest of the group. Each group will be given 15 minutes to present their findings. There will be a 5-minute Q&A session. The objective of the project is learning through each other’s research effort.

OPTIONAL ASSIGNMENT

There is an assignment on immunization that is both interesting and useful to do. I am happy to provide guidance to anyone who is keen to take a crack at the assignment. However, this will not form part of the course grades.

COURSE METHODS

The course will be taught utilizing a combination of practice questions from the end of text, case studies and quizzes to help internalize concepts learnt.

At the same time, references will be made to real life examples to ensure the connection to the real world. CALCULATOR
Any financial calculator with NPV and IRR function keys. Examples include: Hewlett Parkard 17B-II, 12C, 10B and Texas Instruments BAII PLUS.

Despite the pervasive use of Excel, the financial services industry still uses these calculators. As such, it pays to invest in one of these.

These will be used extensively in class and is the only thing you will be allowed in the exams (since no laptops are allowed in quizzes and final exams).
